ELECTRONIC KEYWATCHER KEY MANAGEMENT SMART-KEY LOCKER SYSTEMS TAMPER-PROOF KEY RINGS

KSQ is a distributor of the Keywatcher™ KeyBank™ & Smart-Key™ Electronic Key Management and Locker Systems, which are used worldwide in major Government and Commercial Facilities such as **Correctional Facilities, Defence, Law Enforcement Agencies, Hospitals, Universities, Casinos, Resorts and Hotels, Shopping Centres and much more.**

VERSATILITY KeyWatcher™ not only controls keys but with it's wide range of optional modules and lockers it can also restrict and record user transactions of access control or credit cards, two-way radios, mobile radios, cell phones, duress transmitters, laptops and much more. Where security and accountability for keys and other items is a priority, the KeyWatcher™ is your solution.

INTEGRATION Keywatcher™ includes many standard features such as on-board wiegand interfaces for direct installation of all major access control readers. It also provides communication ports for direct connection to PC's, laptops or LAN's and optional alarm relay outputs for remote monitoring of system alarms from with other security management systems. Other high level interfaces provide compatible integration with third party software, event logs and databases.

ACCOUNTABILITY KeyWatcher™ uses a patented, tamper-proof Smart-Tag that attaches directly onto your existing keys. No modifications, no lock changes and no costs to implement. The Smart-Tag features an embedded chip technology that tracks your keys every time they go out and come back into the cabinet. Transactions are recorded not only at the KeyWatcher™ but also in the Key Pro key management software; logging the user name, key name and number all by time and date. Keys failing their due return within specific time windows or durations are visually and audibly reported in the cabinet LCD screen, at the software transaction log and even via emails or SMS. When keys are lost late or missing you know about it instantly, not hours or days later.

EXPANDABILITY As your needs grow, so does KeyWatcher™ Even though the large range of cabinets cover a number of different key capacities (8-keys up to 144-keys) your unexpected or future need for additional key security is covered. No matter what size KeyWatcher™ system or cabinet you start with it never becomes redundant. By simply adding Slave cabinets to your original KeyWatcher™ Master cabinet, you can expand your needs to accommodate up to 2000 keys.

With a Keywatcher™ system, there is no guess work, no room for error and no compromise. The system does exactly what it' designed for with unparalleled efficiency and reliability.

THE KEYWATCHER® RANGE OF KEY MANAGEMENT CABINETS

8-Key Keywatcher® System

16-Key Keywatcher® System

32-Key Keywatcher® System

48-Key Keywatcher® System

96-Key Keywatcher® System Vertical

96-Key Keywatcher® System Horizontal

Standard Keywatcher Features

- 4-digit Unique User ID and 4-digit User PIN
- Illuminated Key Ports with Individually locked keys
- Modular Design allows for Interchangeable Modules and unique configurations to secure keys, lockers and cards all in the same cabinet and software management

THE KEYWATCHER® RANGE OF SMART LOCKERS

6-Module Mobile Radio Lockers

6-Module Single Door Lockers

6-Module Double Door Lockers

4-Module Laptop/PC Lockers

THE MORSE® RANGE OF TAMPER-PROOF KEY RINGS AND HUBS

SECURITY of keys simply doesn't stop at the KeyWatcher™ To ensure your keys can't be compromised when they are out of the Keywatcher™ we have a range of tamper-proof and tamper evident key rings to maintain their integrity 24/7. The range, unlike any other key ring on the market, accommodate all size keys and key bunches and feature unique, replaceable serialised multi-coloured locking hubs that enable you to remove or add keys and reuse the original key ring over and over again. Other types of rings require special tools to crimp them closed and when cut to either add or remove keys, they are then permanently destroyed, adding substantial and recurring costs.
